I unearthed an item which I have never seen before. It is a TS-170/ARN-5 TEST OSCILLATOR. MFP date is 1944 and this thing looks brand new. Anyway, it looks a lot like a BC-221, case-wise and the bottom half is a battery compartment. The unit has 4 - 3Q4 tubes and a 959 in a cavity-like compartment which has a trombone style attenuator on it. Output is a whip antenna maybe 10 inches long. The tube lineup apparently is three triplers which multiply one of 3 crystals in the 6 MHz range. Has 90 and 150 Hz modulation.

Any idea what this was for - actual output frequency? any interest in it?

Subject: Collins ART-13 TX with PS

Content-Type: multipart/alternative;
boundary="-----1CD276E5096106A68EC6530B"

-----1CD276E5096106A68EC6530B
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

Now that the Dayton excitement has passed I though it would be a good time to post this unusual BA item to the group.

For Sale or Trade.... A Collins built ART-13 military transmitter with the matching AC power supply. This Navy setup is untested but appears to be in good condition. Was last operated over 10 years ago by a local Ham. TX has the optional LF oscillator installed and I think was used with an external speech amp on AM (I do not see the speech amp plug-in module in the TX - I do see the two 811's with the Mod transformer in place) I have some documentation for the TX and some spare parts.

I need to move this item out of storage and will be open to a reasonable offer or Trade deal.

Yes, PS section is heavy - this package is PickUp only in Western NY area.

If you attend the Rochester NY hamfest (2 weeks) you are only about 50 miles away from my location.

I have several pic's available to interested parties.

Hello,

I got a very nice Heathkit DX-40 the other day and proceeded to break the white porcelain section of the band switch :(

Does anyone out there have such an animal? I'd be glad to pay a fair price and shipping costs.

Help me recover from this disaster!

Regards,

Jim

Well, I picked out bits and pieces of Luc's post, and got one of my very own that contained an attachment I did not open. So, *will* the application of magick help in keeping the BA's going longer? If so, I will go out and buy some candles and incense to help me through the 2 SP-600's I have in the kitchen floor. What color candles for Hammarlund rigs? Saint James gray I am sure is correct for Collins, as would be Cedar incense (to represent the spirit of Cedar Rapids).

LOL!

shrug I had to come back with *something* on that post....

Don't know about the BA, but I find that the periodic release of magick smoke from within is a sure way of restoring humility to it's owner ;-)

I'm looking for what's called an "impulse relay" with a 24 volt coil. This kind of relay mechanically latches on the first time you pulse the coil, then off with a second pulse. Potter Brumfield made them with 20amp contacts, which is what I need to run my R-392 in my 24 volt vehicle.

Thanks in advance if you think you might have one in your junkbox.

Matt and the List:

I also would like to mention that Pete Grave is a fine gentleman and an extremely knowledgeable radio and vintage automobile enthusiast. My dealings with him have always been totally satisfactory. Pete and his fine

wife Jan are wonderful people and my XYL and I are proud to know them both. We usually see them both at the Westford MA antique radio show every February and also at Dayton.

Notwithstanding, this list is no place to cast such aspersions on other peoples' reputations and I also recommend that you take any dispute, real or imagined offline and contact Pete directly. I know that he will respond to your communication in a timely fashion. I feel that you owe Pete and this List an apology for your comments that are, in my opinion, in bad taste and totally uncalled for.

73 all,

Michael

Gang-

I have seen this post several times, and while it does have a good
message, it would have been far better sent to specific individuals,
and NOT broadcast to the entire boatanchors list...

To post something like that to the list, which no doubt seemed
innocent and relevant, was not at all on topic for the boatanchors
list, and really was not at all about radios, but rather about
maintaining one's focus in life on what is truly important...

To let this posting go without comment would be to encourage others to
post their own irrelevant messages which in turn would churn the noise
level up on the list and reduce the value of the list to everyone...

Please do NOT post off-topic and non-boatanchor related material to
the list... If your post is not directly related to old tube radios,
or is one of the "discouraged topics" send it to the specific people
you think need to see it and do NOT post it to the boatanchors list...

We have gone a long time without the "Penalty Box" enforcement, and I
would like all ya'll's cooperation in not making me into the bad guy

again...

Perhaps it is the case the Mr. Grave is a fine gentleman to deal with on a face to face basis, however, my long distance dealing with him was most frustrating and unsatisfactory. I purchased a SX-28A from him which I paid promptly for with a cashiers check (John, I believe you posted the item to the list for Peter):

- It took almost 1.5 years for him to ship it to me.
- It took numerous begging and threatening phone calls and faxes to get it done.
- I was promised many times the radio would be shipped in a "day or two."
- I was promised the radio was in working condition; it was not.
- When finally shipped, radio was poorly packed and arrived with the antenna and speaker posts on the rear smashed. These parts are specific to the SX-28. Try to find replacements.
- During this time period I was contacted by another person who was trying to get Peter to ship two R-390A's and was having the same problems.

Did I get the radio I bought? Yes, but that does not make him an honorable gentleman. I would not do business with him unless he was standing in front of me holding a radio in his hands.

Did I do as the previous posters suggested by dealing with Mr. Grave directly and keeping my problem off the list? Yes I did, and I would never have posted anything more until I saw these

posts praising his honest dealings. That certainly was not my experience and I have no problem posting the facts of my transaction here.

Subject: WTB: case/bottom covers for National RAO-7
Mime-Version: 1.0
Content-Type: text/plain; charset="us-ascii"; format=flowed

I would like to buy a stock case for my restored National RAO-7 Navy receiver, which is physically identical to the RAO-9. The RAO-7 looks similar the RAO-2/3/5/6 and NC-120, without the S-meter. Where it differs is in the type of case. The case attaches to the front panel with 10 or so bolts and is one-piece construction to accommodate the receiver and the 'back-porch' RF deck section.

As I understand from the TM literature, the case is of steel construction, louvered, painted black, and has a copper-clad interior. The dimensions would be approximately 11-1/2" high, 19" wide and 16" deep, however, the front panel mounting doesn't appear to be a standard rack-mount drilling.

I am also in need of both bottom covers (main chassis and back porch), and the thin aluminum cover for the RF catacomb enclosure. The previous owner began a repair job on this fine old receiver, than unfortunately became an SK. The seller purchased the receiver

from the estate as is, and missing covers, then I came into the picture. So, if you have a case, covers or a junker RA0-7/9, Or even a working RA0-7, I would be interested in hearing from you. Please drop me a line.

Hi guys:

Sorry to take up bandwidth, but my E-Mails to Ronnie (W5SUM) seem to be getting lost in cyber-space.

Ronnie, I have those 805 sockets for you.....please call me, unless I'm on your "S"-list for some reason.

1 (805) 968-4227

Bill W6WCW (E-Mail: WB6WCW@aol.com)

I agree with the idea that a person should never be singled out on the reflector. Lets keep such legal matters private. There is talk of a web page to list those who are dishonest (both persons and vendors). Disagreements will come up and I for one try to make things right including taking back anything. With our old gear (and shipping) problems can and do occur!

Hi all,

Well, I don't think I'm going to go much farther with this one. Don't know how much I'd really get back into AM after being out of it 35 yrs or so. Plus I need some space, and get tired of moving this biggy around.

The Valiant is operating, but probably needs attention in a few areas. I have replaced the troublesome 18k VFO dropping resistor, with a 3 watter, mounted outside of the VFO box. I have operated it recently on 10m (& 40 I think). Front panel is good from a straight front view, but has some rubs/scratches around the outside lip where it gets layed on when you tip the rig up. Case is original paint, oughta be re-done. Chassis is dusty, but will clean easily. All good tubes, 3B28 rectifiers still. (one is loose in its' base) I've started replacing the missing white dots in the knobs, seem to drop & lose every other one I make, so haven't finished.

I don't really want to ship it, so \$325 if picked up, or I will deliver to the Durham, NC, fest on Sat. \$375 plus actual shipping cost if shipped. I'll do a good job of packing.

Also have an SB-10 that I got with it, but not made the mods. \$65 pickup or \$75 plus shipping. Won't sell separately.

Glad to answer any questions, & can take some digipix.

73,

Al, W8UT

New Bern, NC

I must respectfully disagree, and I honestly mean "respectfully".

To forbid negative comments about individuals' business practices, but permit positive comments, only invites disaster.

I, for one, certainly would not want to be lulled into security in dealing with someone. I really don't give much, if any, importance to the times someone is honest and trustworthy, if in fact that same person may at times be the opposite. I know of know one who is ONLY dishonest.

If there should be no tales of dishonesty on a list, then there should be no claims of any honest dealings of a person. For me, I would want at least 100 to 1 ratio of honest to dishonest experiences. AND, I sure don't think we are ready for 100's of adoring emails about anyone. In other words ... it is the eMails claiming honesty that are more likely a waste of bandwidth.

Now, regardless of everything I have already said, I certainly do want to be warned about people who are likely not to accurately describe and complete transactions. (And, that's regardless of any reasons ... sickness, death, insanity... whatever). If some seller does not ship in a year and half, I don't care if they are "honest", have nice wives, good children, go to church, or not.

The only partial answer that I can think of that would serve my wants, would be that before

negative postings be made, that a good investigation is done, and that it be presented in a pure factual manner. That means no words like "crook", "thief" "lie" "dishonest" etc. be used.

If it wasn't delivered in a year and a half, is it going to make any difference in deciding to do business with that person, to know any other facts unless they describe a total physical inability to perform.... like, in a comma in the hospital.

There is a great amount of respect for straight honest dealings between us BA'ers. I presume a lot of honesty, and efficiency, in doing business with subscribers to this list and/or baswaplist. I certainly want to know about any exceptions. Don't you?

The only other thought that comes to mind, is possibly discussing such subjects with Jack before posting. But that is a lot of imposition upon Jack. He has never said that he has any secret ambition to be a judge or chancellor.
